

InnovoGraph's Open Strategic Innovation for Communities (OSIC) on Podio environment is only partly about rendering value from Data and Information for enhanced Knowledge, Understanding, and Wisdom (DIKUW). So the OSI on Podio 'understanding' value is in InnovoGraph's unique, powerful configuration of a Podio workspace template, that can be cloned at will, amplifying Unified Communications and Collaboration between the local strategy team and external stakeholders. The OSIC value is especially in the ongoing business model innovation modality, the integrated business tasking, and with basic web technology--and that is a lot of the globe now--an always accessible world of innovative productivity. DIKUW and the Department of Energy's Research, Development, Demonstration, and Deployment (RDD&D) model have similarities.

- Unified Communications and Collaboration
- Project-based learning around our greatest challenges
- Issues Information and Planning System
- Business model innovation for existing organizations
- Professional skills development for the Digital Economy
- Strategy prototyping and launch platform for new initiatives

What Asheville, Buncombe, and North Carolina gets with OSIC
